

necessary clauses (i)-(iii): input assembly, action exposure, continuation

clauses (iv)-(viii): may be trivial, and a trivial value is still a value

M Meta - metadata on the system, not a clause of the definition							
M1 target_domain	{6}	M2 open_source	3	M3 model_agnostic	2	M4 primary_artifact	3
M5 first_release_date	date	M6 pinned_version	string	M7 stars	integer		

Value column: n = one of n permitted values; {n} = multi-valued, a system may carry several of the n values at once (15 of the 38 dimensions); integer / date / string = not an enumeration, so no value count.

Thin arrows: the A -> B -> C -> A step loop. Dashed arrows: the two deliberate clause displacements, F1 to C (clause iii, termination) and G4 to F (clause vi, permission). Generated from schema/dimensions.json v1.0.0 by scripts/plot_taxonomy.py.
